PROFESSIONAL SUMMARY

Software Engineering (Honours) graduate from the University of Queensland with hands-on experience building cloud-native applications, scalable backend systems, and infrastructure automation using Azure, AWS, Python, Docker, and CI/CD. Proven track record automating network and data workflows in production environments, including a 40% reduction in provisioning effort and a 15% improvement in forecasting accuracy. Full Australian work rights under the Subclass 485 Visa; seeking Cloud Engineer, DevOps, or Platform Engineering roles.

KEY HIGHLIGHTS

- 40% reduction in network provisioning effort through Python and Docker automation at Cisco (L2X Brazil).
- 91% model accuracy delivered on 50,000+ records via a production Flask ML API at Reliance Jio Brain.
- 15% improvement in demand forecasting accuracy across 10+ years of Queensland energy data.
- Currently automating national-scale 5G infrastructure using Python, MCP tooling, and A2A agent workflows.

EDUCATION

The University of Queensland, Brisbane, Australia *December 2025*
Bachelor of Engineering (Honours), Software Engineering — Minor in Data Science

- Women in Engineering Student Leader, UQ

TECHNICAL SKILLS

- Cloud: Microsoft Azure, AWS, Cloud Deployment, Infrastructure Automation
- DevOps: Docker, CI/CD, GitHub Actions, Linux, Git
- Programming: Python, Java, SQL, JavaScript, PostgreSQL
- Backend: Flask, REST APIs, Node.js, Microservices, API Integration
- Architecture & Business: Solution Design, System Design, Cloud Migration Concepts, Requirements Gathering, Stakeholder Communication, Agile/Scrum, SDLC, Technical Documentation

EXPERIENCE

Graduate Engineer — Software & Network Infrastructure *April 2026 – Present*

- Develop Python-based backend services, MCP server tooling, and A2A (agent-to-agent) workflows to automate operations across national-scale 5G network infrastructure.
- Engineer API-driven network provisioning solutions in Python, streamlining infrastructure workflows and improving operational efficiency across large-scale 5G environments.

Undergraduate Researcher *July 2024 – July 2025*
The University of Queensland

- Developed Python-based forecasting pipelines using Australian weather and electricity datasets, improving demand forecasting accuracy by 15%.
- Built reproducible data processing workflows and benchmarked 5+ forecasting models across 10+ years of Queensland energy data to support sustainable energy research.

ML & Software Development Intern *December 2024 – February 2025*
Reliance Jio Brain

- Architected and deployed ML models on 50,000+ records with 91% accuracy through robust feature engineering and automated data preprocessing pipelines.
- Developed and deployed a Flask REST API serving real-time ML predictions with sub-second response times, supporting production decision-making workflows.

Software Engineering Intern *December 2023 – February 2024*

L2X Brazil (Cisco Sydney)

- Automated network deployment workflows using Python and Docker, reducing provisioning effort by 40% while improving deployment consistency.
- Collaborated within Agile teams to ship production releases via CI/CD pipelines, code reviews, and unit testing, reducing post-deployment defects by 15%.

PROJECTS

Alzheimer's Disease Classification *September 2023 – October 2023*

- Improved a Vision Transformer pipeline to 95% accuracy on ADNI datasets using image preprocessing and augmentation.
- Validated model robustness against medical imaging metrics to ensure reliable diagnostic classification.

MoviePicker — Real-Time Web Application *February 2025 – May 2025*

- Engineered a scalable web application using Flask REST APIs, Docker, and AWS ECS for real-time movie streaming.
- Designed a modular backend architecture with RESTful APIs, improving maintainability and feature integration.
